

If I felt tense during the screening and my blood pressure readings are unnaturally high, can I redo the screening?

Last Modified on 04/04/2023 7:23 am CAT

Yes. The standard process will be to perform the voluntary screening, which includes an active fitness assessment. If the outcome of the voluntary screening provides improved results, the results will be updated. This functionality is not currently enabled but will be available soon. As a temporary workaround, your adviser can resend a screening link for an initial screening and you can rescreen.
