

How do you verify that the correct person is doing the screening?

Last Modified on 18/04/2023 8:56 am CAT

We use the home affairs data to validate that it is the correct insured life who is doing the screening. This will happen automatically in the background for most clients, while others may be requested to scan their Green barcoded ID book, ID card or passport with their smartphone before they do their screening. We will check throughout the screening process that the correct insured life is doing the screening.
